

Multi-PPA: Speech and Language Therapy Study for Progressive Aphasia

Researchers at the University of Texas at Austin are conducting a study to develop effective speech and language therapy options for individuals with progressive aphasia.

RECEIVE PERSONALIZED SPEECH/LANGUAGE THERAPY AT NO COST.

Who can participate?

- Individuals who:
 - Have progressive speech-language difficulty
 - Primary progressive aphasia (PPA)
 - Primary progressive apraxia of speech (PPAOS)
 - Can produce some spoken language
 - Speak English and/or Spanish
 - Have a family member or friend who can participate as a study partner

What happens in our study?

- Short evaluation to see if you are eligible
- Assessment of speech-language skills before and after treatment, and also at 3-month follow-up
- Two weekly teletherapy sessions with a speech-language pathologist for about 3 months
- Independent home practice with training materials
- Partner training sessions throughout treatment to support communication
- \$200 gift card for participation
